TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, C#, Dart, JavaScript
- **Cloud & Deployment:** Docker, Nginx, AWS, CI/CD Pipelines, Git/GitHub
- **Embedded & Communication:** Raspberry Pi, Arduino, OCPP, CANbus, TCP/IP, Socket Programming
- **Development Practices:** OOP, System Integration, Troubleshooting
- **AI & Advanced Software Architecture:** Multi-Agent Systems, LangChain, AI-Assisted IDE Development, SaaS Architecture Design, Product Orchestration
- **Frontend & Mobile:** React.js, Flutter, Metronic Templates
- **Web & Backend:** Django, Flask, .NET, REST APIs, Microservices, SaaS Platforms

LANGUAGES

- Turkish (Native)
- English (Intermediate)

Software Engineer with experience building AI-powered developer tools, multi-agent architectures, and scalable SaaS platforms. I take an active role across the full product development lifecycle, including backend engineering, database design, DevOps pipelines, and modern UI layers — from system architecture to production deployment. I work on AI-driven IDE solutions that enable autonomous code generation for embedded software teams, contributing to model integration, platform scalability, and robust infrastructure design.

Throughout my career, I have developed high-impact software systems in embedded technologies, cloud-native applications, microservice architectures, and EV charging solutions. I focus on delivering innovative, scalable, and maintainable engineering solutions to complex real-world problems.

WORK EXPERIENCE

SOFTWARE ENGINEER

OmniCon (Omnimatic) | | Gebze, Kocaeli / Turkey | Jun 2025 -

- Developed and maintained a microservices-based SaaS platform for carbon footprint, CBAM compliance, and sustainability maturity reporting.
- Designed backend services (Python, PostgreSQL, Django) and built interactive dashboards (React.js, Metronic), integrating major ERP systems (SAP, Logo, Uyumsoft, Mikro, IFS).
- Improved development workflows by leading Agile processes and implementing CI/CD pipelines (GitHub Actions), increasing release speed and team efficiency.
- Deployed applications in cloud and containerized environments (Docker, Nginx, AWS), ensuring scalability, security, and consistent high availability.

SOFTWARE ENGINEER

JTR | Jewellery Technology Research | | Gebze, Kocaeli / Turkey | Dec 2024 - April 2025

- Built and maintained a Help Center platform for the Reveal 2S device, enhancing customer support efficiency.
- Developed full-stack web applications using Django, with API integrations for cloud and mobile communication.
- Optimized Django backend and containerized deployment pipeline (Docker + Nginx), improving reliability and reducing deployment times
- Implemented CI/CD pipelines, reducing deployment effort and accelerating delivery cycles.

SOFTWARE ENGINEER

Bluetech Charging Stations | Dilovası, Kocaeli / Turkey | Jun 2022-Jul 2024

- Developed and maintained OCPP client/server communication, ensuring secure and reliable EV charging transactions.
- Implemented CANbus and powerline communication protocols, improving stability and performance of charging systems.
- Designed embedded solutions with Raspberry Pi, reducing system complexity and improving maintainability.
- Supported commissioning and testing of charging stations to meet compliance and safety standards.

INTERNSHIP

Engineer Internship

T3 Industrial Automation | Erenler, Sakarya / Turkey Feb 2021-Jun 2021

- Conducted Image Processing and Deep Learning projects, achieving improvements in detection performance and model accuracy.
- Provided automation project support, helping to streamline production workflows and reduce manual interventions.

Engineer Internship

Elvan Group | Arifiye, Sakarya / Turkey Jan 2020-Feb2020

- Troubleshoot conveyor line malfunctions, restoring production flow and reducing operational interruptions.
- and Optimized factory automation systems to enhance production throughput and operational efficiency.

Engineer Internship

Turkish DO & CO | İstanbul Jul2019-Sep2019

- Maintained and repaired food production machines, ensuring continuous operation and extending equipment lifespan.
- Developed innovative solutions for production line improvements, facilitating smoother operations and improved resource utilization.

CERTIFICATIONS & TRAINING

- Deep Learning and Image Processing - DATAI TEAM (Udemy)
- Flutter Bootcamp Programı | Dart | 2025 (Udemy)
- Artificial Intelligence Camp (ISUBU SIBEM)
- Sıfırdan Django - Docker - Nginx - AWS S3 - Server Deploy (Udemy)
- Mvc5 ile Sıfırdan Admin Panelli Dinamik CV Sitesi(Udemy)
- Raspberry Pi ve Nesnelerin İnterneti'ne Giriş(Udemy)
- Sıfırdan Flutter ile Android ve İos Apps Development (Udemy)

R&D ENGINEER

T3 Industrial Automation | Erenler, Sakarya / Turkey | Jun 2021-Feb 2022

- Conducted research in Image Processing and Computer Vision, applying advanced object recognition algorithms.
- Developed Lidar and Radar sensor integration methods for autonomous systems.
- Designed and implemented electronic control boards for automation systems.
- Authored R&D reports detailing methodologies, experiments, and results.

EDUCATION

- COMPUTER ENGINEERING - POSTGRADUATE STUDENT

Sakarya University of Applied Sciences | Sakarya, Turkey | 2023-Present

- MECHATRONICS ENGINEERING - BACHELOR'S DEGREE

Sakarya University | Sakarya, Turkey | 2017-2021

PROJECTS

AI Developer Tools • Multi-Agent Systems • SaaS Architecture

- Built an AI-powered developer platform for embedded software engineers, enabling autonomous code generation and workflow automation.
- Designed and implemented multi-agent orchestration using LangChain and LangGraph, supporting specialized agent collaboration.
- Developed backend services in Python, focusing on scalable architecture and modular system design.
- Implemented containerized environments with Docker, managing staging and production deployments.
- Built MCP server/client components to enable tool execution and agent-to-system interaction.
- Contributed to the overall platform architecture, ensuring extensibility and maintainability for future integrations.

Personal Web site

- Built a web application using Django with PostgreSQL and Docker for containerized deployment.
- Integrated Nginx for internet access and Amazon S3 for optimized file management.
- Used Unicorn for performance enhancement and security improvements.

LSTM-Based Sentiment Analysis

- Developed a sentiment analysis model using LSTM neural networks.
- Trained and tested on IMDb dataset, achieving high accuracy in sentiment prediction.

Measuring Object Size with Camera

- Developed an image processing system using OpenCV to measure object sizes in millimeters.
- Utilized Python and computer vision techniques for real-time measurement.

Object Counting System with Camera

- Implemented a vision-based object counting system for conveyor lines using OpenCV in Python.
